

CENTURION®

# Chest Tube Insertion Trays

A chest tube insertion tray customized to provide you exactly what you need, in the order you want it. We can custom build a chest tube insertion tray to meet your specific needs using quality Centurion instruments to make your procedure easier and safer. Our tray contains two new products – the Centurion Chest Tube Anchor and the Centurion Blunt Dissector.

## Centurion Blunt Dissector

This instrument was designed and manufactured with grooves in the precise area where the doctor's forefinger is placed to guide the instrument through the cavity, giving a better grip and increased sensitivity.

Our new device is ergonomically designed to allow the doctor's natural grip to open the jaws of the instruments by a squeezing motion versus a spreading motion.

## Centurion Chest Tube Anchor

The chest tube anchor is intended to improve the securement of the chest tube compared to the common method of using sutures.

The anchor provides strong, lasting securement under wet conditions. It is extremely easy to use and is designed to work with any size tube.

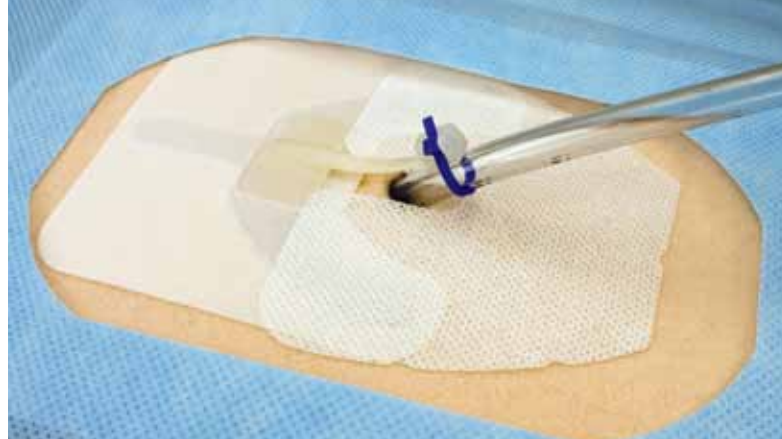

Order No. 67920

**Blunt Dissector**

Unique design features intuitive "squeeze to open" mechanism

Order Nos. CT40PXT and CT40PXT2

**Chest Tube Anchor**

Exclusive device holds chest tubes firmly in place
