# Universal Central Line Insertion and Prep Trays

Using a universal Centurion® Central Line Insertion Tray standardizes protocols and provides a maximum sterile field for any type of central line insertion – PICCs, CVCs, IJs, etc. – while complying with all the latest guidelines and requirements. Centurion® trays are tailored to your facility's specific needs to provide all the necessary components to fully protect caregivers and patients alike.

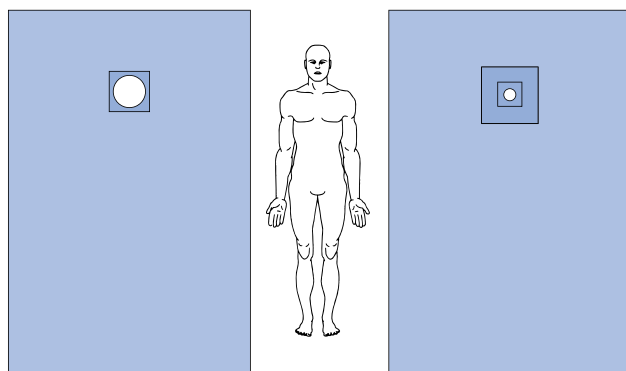

## improve procedures

- Creates a single, consistent procedure for all insertions to ensure maximal barrier precautions
- Addresses key components of IHI's "100,000 Lives Campaign" Central Line Bundle to reduce the incidence of Catheter-related Bloodstream Infections
- Meets CDC guidelines for prevention of intravascular catheter-related infections
- Complies with latest JCAHO requirements for medication labeling
- Customized to meet your specific needs, streamline set-ups and increase efficiency

## protect patients

- Full Body Fenestrated Drapes provide recommended head to toe coverage, including:
  - 60" x 90" with an adhesive incise area for secure placement and a window to allow the physician to "map" the site beyond the fenestration
  - 65" x 90" with 4" x 4" fenestration and adhesive for secure placement
  - Many other drape sizes and styles available

- Chlorhexidine-based ChloroPrep\* applicator provides recommended antiseptis
- Centurion® Sterile Labels enable compliance with medication labeling requirements
- SorbaView® Window Dressings offer superior adherence and patient comfort
- SilverSite™ Antimicrobial Site Dressing delivers patented antimicrobial protection to the insertion site for up to seven days

# Universal Central Line Insertion and Prep Trays

## IHI recommendations

"For the operator placing the central line and for those assisting in the procedure, maximal barrier precautions means strict compliance with hand hygiene and wearing a cap, mask, sterile gown, and gloves. The cap should cover all hair and the mask should cover the nose and mouth tightly. These precautions are the same as for any other surgical procedure that carries a risk of infection.

For the patient, applying maximal barrier precautions means covering the patient from head to toe with a sterile drape, with a small opening for the site of insertion."

- *Institute for Healthcare Improvement,  
100,000 Lives Campaign,  
"Prevent Central Line Infections: How-to Guide"*

## CDC guidelines

"Maximal sterile barrier precautions (e.g., cap, mask, sterile gown, sterile gloves, and large sterile drape) during the insertion of CVCs substantially reduces the incidence of CRBSI compared with standard precautions..."

- *Centers for Disease Control and Prevention  
"Guidelines for the Prevention of Intravascular  
Catheter-Related Infections," CDC Recommendations  
and Reports, August 9, 2002 / 51(RR10);1-26*

## JCAHO requirements

"Medications and solutions both on and off the sterile field should be labeled even if there is only one medication being used."

- *Joint Commission on Accreditation of Healthcare Organizations,  
2006 Patient Safety Goals*
