

WHY CHOOSE CENTURION INSTRUMENTS?

SCISSORS

CENTURION:

Manufactured and finished to ensure straight edges

Surfaces are smooth

Even, identical thickness on both jaws

Cuts effortlessly through tissues and sutures in one continuous motion

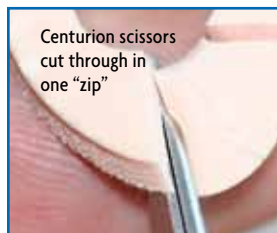

Procedures go faster, outcomes are better

CENTURION:

Cuts easily right through moleskin and foam

Blade is sharp on entire length of the blade, from end to end

OTHER MANUFACTURERS:

Often manufactured with dull blades that won't cut

Jaws are uneven

Surfaces are very rough

Don't cut well – requiring clinician to take multiple scalloped "bites" out of tissue

OTHER MANUFACTURERS:

Doesn't cut through moleskin or foam – causes material to squash and bend

Like skin, material only "flaps" up

NEEDLE HOLDERS

CENTURION:

Manufactured and finished to ensure smooth, even edges – in fact, hinges are guaranteed to not snag

Each instrument is virtually identical

Both sides of instruments are symmetrical

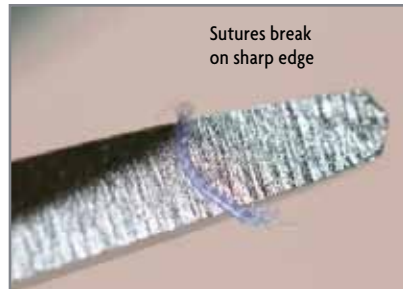

OTHER MANUFACTURERS:

Surfaces and hinge edges are rough and sharp, causing sutures to snag and break

Snagged or broken sutures add to procedure time

Jaws don't meet up evenly

Instruments vary dramatically in angle, thickness, etc
