

# Urine Catheter Kit

Protective sheath helps keep catheter sterile

Vent allows trapped air to escape—lid stays on!

Spill-free transport

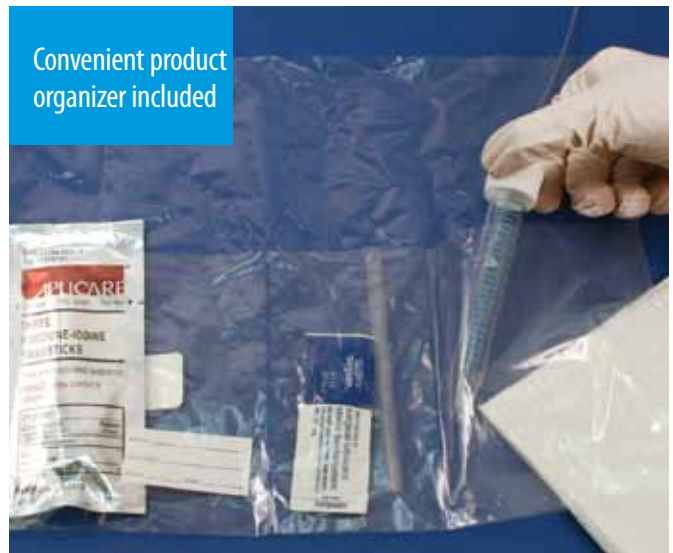

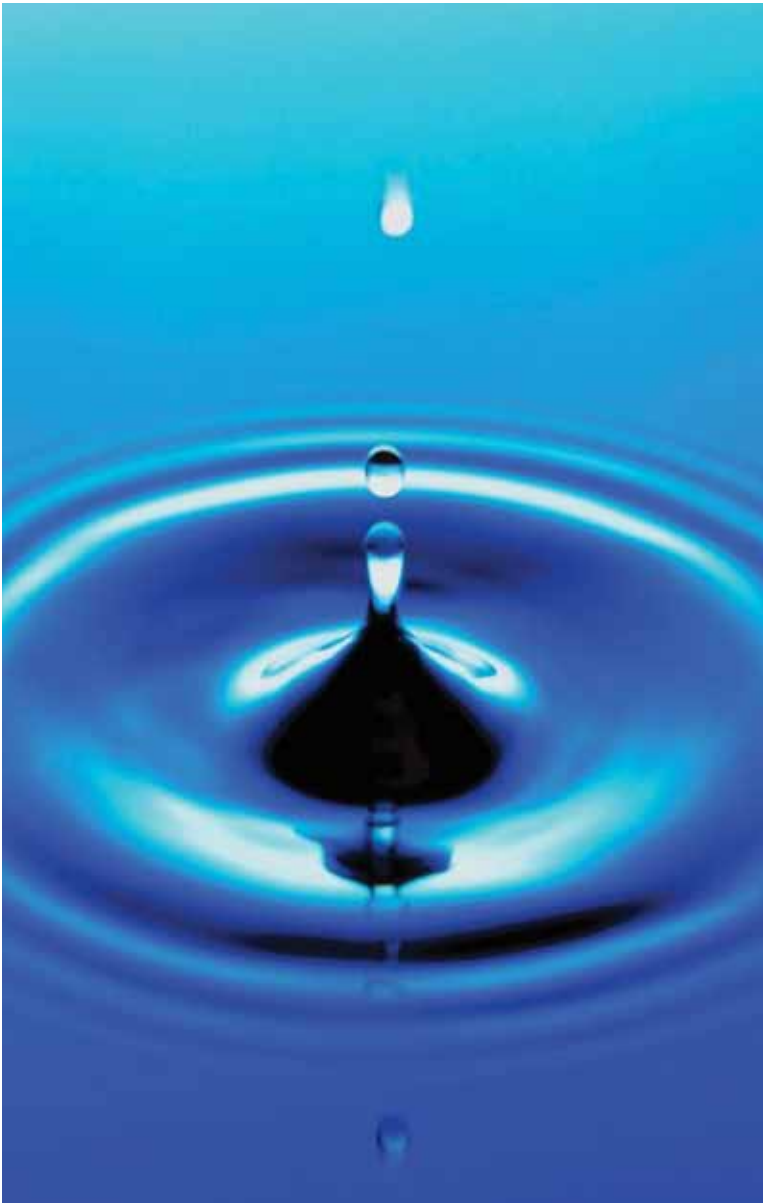

Collect a clean sample without any mess to clean up!

Female • Male • Pediatric

- Smooth, tapered catheter tips for patient comfort
- Vented lid promotes urine flow without the need to loosen lid
- Catheters are latex-free
- Centrifuge-ready tubes available in 20cc standard or larger 50cc capacity for multiple testing
- Available in 5 or 8 French and 6" or 9 1/2" lengths
- Latex-free kits are available
- Customize kits with only what you need – no waste!

# Pure Samples Spill-Proof Design

Centurion® Urine Catheters create a completely closed system – from sampling to lab! The flip-top cap features a vent that allows air trapped inside the tube to escape without loosening the lid. This allows the urine sample to flow into the tube quickly and easily, without spilling! Once the sample is taken and the catheter is removed, the spout closes and the tube is ready for transport to centrifuge. Catheters are available in various sizes for female, male, and pediatric urine sampling.
